Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 6, 2006 has been entered.

Response to Amendment

Applicant's arguments filed December 6, 2006, have been fully considered but they are not deemed to be persuasive.

Applicant's arguments with respect to claims 1-7, 9-21, and 23-30 have been considered but are deemed to be moot in view of the new grounds of rejection.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-7, 9-21, and 23-30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Art Unit: 3745

The claims include a limitation that "the control program configured to calculate a pressure in the at least one fluid chamber required to move the piston a selected distance...in response to pressure measured by the at least one pressure sensor and in response to position measured by the at least one position sensor" (claim 1 line 20-23) or similar (claim 8 line 20-24; claim 19 line 18-21). Figure 2 shows that the step 104 calculates pressure based on desired movement; which does not include use of the pressure from the pressure sensor. Therefore, calculating the pressure required to move the piston a selected distance, in response to the position measured by the at least one position sensor is enabled; but in response to pressure measured by the at least one pressure sensor is not enabled.

Claim 29 is rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 29 line 1-3 "a controller for executing the control program...sensor, and" should be replaced by --the control device--, to agree with claim 1 line 17.

Conclusion

Claims 1-7, 9-21, and 23-30 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 1st and 2nd paragraph, set forth in this Office action.
